

Fixing "Not Enough Data" for Large Language Models

A 2025 Survey Review (Chai et al.)

Mohibkhan Pathan
CMPE 297 - Special Topics
Professor Vijay Eranti

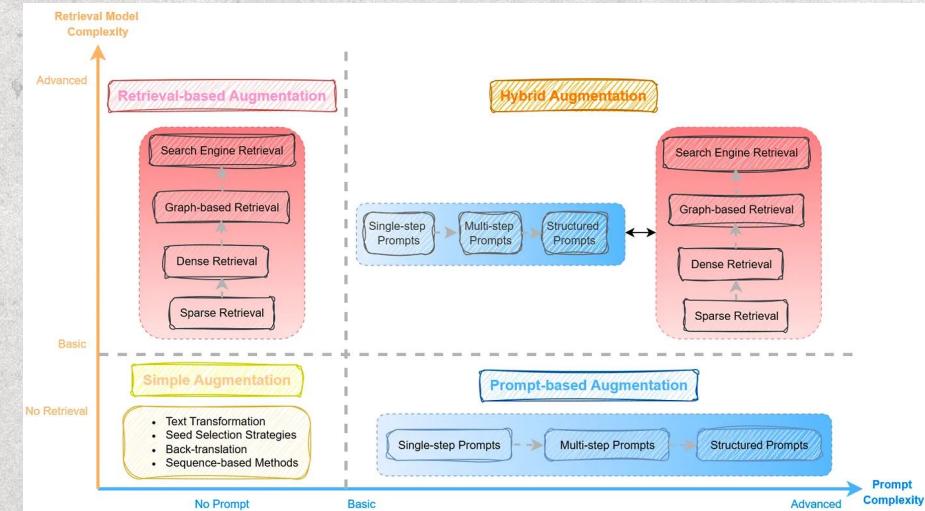

The Four Families of Augmentation

- **Simple:** Edit words (synonyms).
- **Prompt-based:** Ask LLM to generate.
- **Retrieval-based:** Search for facts first.
- **Hybrid:** Mix prompting + search.

Complexity Spectrum

- Simple methods have "No Prompt/Retrieval."
- Hybrid methods are the most complex "Advanced" end of the spectrum.

Design Dials: Granularity

- **Token Level:** Changing small words.
- **Sentence Level:** Generating new sentences (most common).
- **Document Level:** Generating whole docs.

Methods	Token Level	Token-span Level	Sentence Level	Passage Level	Context Level	Document Level
Simple Augmentation						
TransformersDA [10]	✓	✓				
DAGAM [11]	✓					✓
GenAug [12]	✓					
AUGPT [13]			✓			✓
CQA [14]	✓					
Selection-DA [15]			✓

UniMS-RAG [65]						✓
QA-Internet [8]						✓
ReAct [66]						✓

Post-Processing

- **Consistency Checks:** Ask model "Are you sure?".
- **Filtering:** Remove bad/unsafe examples.
- **Human Pass:** Manual check for safety.

Evaluation Metrics

- **Auto:** Accuracy, F1, BLEU (Fast).
- **Human:** Coherence, Safety (Slow but necessary)

DA techniques	Evaluation	Metrics	Methods
Simple Augmentation	Automatic Evaluation	Accuracy	DAGAM [11], MRC-QA [19]
		Exact Match score	MRC-QA [19]
		Recall	AuGPT [13], MRC-QA [19]
		F1 Score	AuGPT [13], Selection-DA [15], MRC-QA [19]
		Perplexity	GenAug [12]
Prompt-based Augmentation	Automatic Evaluation	BLEU	GenAug [12], AuGPT [13], LeCA [17]
		Accuracy	WANLI [22],LLM2LLM [37],FlipDA [4],GPT3Mix [20],DA-intent [21]
		ROUGE	DAIL [25],EPA [27],SUNGEN [31],PromptMix [38]
		Exact Match score	Dialogue-Convert [29],Synthetic-DA [36],EPA [27],TAPP [40]
		Recall	Read-Com [24],TAPP [40],Generative-DA [33]
Human Evaluation	Automatic Evaluation	F1 Score	DA-intent [21],GENIUS [5]
		Perplexity	Dialogue-Convert [29],LLM-DA [35],X-GEAR [41],Read-Com [24]
		BLEU	Generative-DA [33],EPA [27],FlipDA [4]
		Consistency	GENIUS [5]
		Coherence	DA-NMT [26],EPA [27]
Retrieval-based Augmentation	Automatic Evaluation	Informativeness	AugESC [23]
		Safety	
		Accuracy	zic! [48]
		ROUGE	LAPDOG [59]
		Exact Match score	IM-RAG[55]
Human Evaluation	Automatic Evaluation	Recall	DialogGen [50]
		F1 Score	EAE-RAG [56],X-GEAR [41],IM-RAG [55],AugmentedSBERT [47]
		Perplexity	Internet-Aug [49],DialogGen [50],Efficient-RAG [58],LAPDOG [59]
		BLEU	Internet-Aug [49],DialogGen [50]
		Consistency	RetGen [7],Efficient-RAG [58],LAPDOG [59]
Hybrid Augmentation	Automatic Evaluation	Coherence	SeeKeR [57]
		Informativeness	ChatPLUG [51],RetGen [7]
		Safety	ChatPLUG [51],RetGen [7]
		Hallucination	ChatPLUG [51]
		Knowledgeable	ChatPLUG [51]
Human Evaluation	Automatic Evaluation	Engaging	Internet-Aug [49], SeeKeR [57]
		Accuracy	Internet-Aug [49]
		ROUGE	KAPING [62],ReAct[66],QA-Internet [8],DAICL [61]
		Exact Match score	UniMS-RAG[65]
		Recall	RGQA [53],ReAct [66],QA-Internet [8]
Human Evaluation	Automatic Evaluation	F1 Score	RGQA [53],ConvAug [43]
		BLEU	RGQA [53],RADA [64],DAICL [61],UniMS-RAG [65]
		Consistency	CGRG [54],UniMS-RAG [65]
		Coherence	SeeKeR [57]
		Fluency	UniMS-RAG [65]
		Factually Correct	ALCE [63]
			ALCE [63]

Key Findings

- **Retrieval-based methods** significantly reduce hallucinations compared to pure Prompt-based methods.
- They ground the output in real facts.
